Simply Brilliant

Highly Visible Stent System

Optimized Pin-and-Pull Delivery System for Simple Deployments

Designed for Easy, Precise Placement

*See back for complete indication.
Precautions:

Contraindications:

- Patients with known hypersensitivity to nickel-titanium may suffer an allergic reaction to this implant.
- Stenting across a major branch of the treated vessel is not recommended.
- There may be limited data regarding overlapped stents, and the effect of repeated dilatation of endothelialized stents is unknown.
- A limited subset of patients required overlapped stents in the clinical study, therefore, data regarding overlapped stents is limited.
- Intimal injury/dissection of the treated vessel is associated with the procedure.
- Aperistaltic or angiofibromatous strictures may result in intimal injury.
- Atheroembolization following distal embolization is possible.
- Overstretching of the artery may result in dissection, spasm, or perforation.
- Overstretching the artery may result in spasm, dissection, or perforation that may result in serious complications.
- Hypertension is commonly associated with iliac stenting.
- LifeStar™ Vascular Stent is a self-expanding nitinol stent that MUST NOT be expanded beyond its labeled diameter by dilatation with a PTA balloon.
- Overstretching the artery may result in spasm, dissection, or perforation that may result in serious complications.
- Hypertension is commonly associated with iliac stenting.
- LifeStar™ Vascular Stent is a self-expanding nitinol stent that MUST NOT be expanded beyond its labeled diameter by dilatation with a PTA balloon.
- Overstretching the artery may result in spasm, dissection, or perforation that may result in serious complications.
- Hypertension is commonly associated with iliac stenting.
- LifeStar™ Vascular Stent is a self-expanding nitinol stent that MUST NOT be expanded beyond its labeled diameter by dilatation with a PTA balloon.
- Overstretching the artery may result in spasm, dissection, or perforation that may result in serious complications.
- Hypertension is commonly associated with iliac stenting.
- LifeStar™ Vascular Stent is a self-expanding nitinol stent that MUST NOT be expanded beyond its labeled diameter by dilatation with a PTA balloon.
